PRODUCERS BOARD *and* ASSOCIATION

5405 West Interstate 40, Amarillo, TX 79106
(806) 352-2191 | www.texaswheat.org

The Texas Wheat Producers Board (TWPB) and Association continue to work diligently to make resources readily available for wheat producers. Texas Wheat has worked to strengthen the stability of wheat markets, promote and fund essential wheat research, build customer loyalty and support programs to enhance producer profitability. The board oversees and allocates the expenditures of the three-cent-per-bushel statewide wheat checkoff for use in research, market development and education. The association is the legislative arm of the organization, providing a single united voice for Texas wheat producers in Austin and Washington, D.C.

RESEARCH: Funding research is an integral part of the board’s mission. During the 2024-2025 fiscal year, the TWPB will support a number of initiatives, allocating \$344,240 for researchers to address a variety of issues concerning Texas Wheat. Some of the research projects supported by the TWPB include the wheat breeding program and the statewide Uniform Variety Trials found in this publication.

MARKET DEVELOPMENT: The board remains committed to ensuring the competitiveness of Texas wheat domestically and internationally. Partnerships with U.S. Wheat Associates, the Texas Grain and Feed Association and Plains Grains, Inc. help carry out the mission to increase demand for Texas-grown wheat. In 2024, the board hosted an international trade team from China and participated in a trade mission trip to Latin America, building upon existing relationships and opening the door for market expansion.

EDUCATION: In addition to developing educational programs for youth, consumers and producers, the TWPB participates in several national programs to increase awareness and consumption of wheat products. These programs include the Home Baking Association, which focuses on giving family and consumer sciences teachers and extension educators the tools and knowledge to promote the practice of home baking while incorporating wheat-based products. The TWPB also partners with the Wheat Foods Council to distribute scientific and nutritional information to health professionals, dietitians, personal trainers, educators, media personnel and consumers.

LEGISLATION: Throughout the year, the Texas Wheat Producers Association staff and leaders engaged elected officials in Austin and Washington, D.C. on several issues, including the Farm Bill, disaster assistance, market development and conservation. The association’s commitment to creating a unified voice in government for Texas wheat producers has never been stronger.

The TWPA is a voluntary membership organization funded solely by membership dues. This grassroots organization is directed by an executive committee of Texas producers who represent areas spanning the entire state.

Introduction The Uniform Wheat Variety Trial (UWVT), presented in the following pages, is coordinated and implemented by numerous Texas A&M AgriLife Research and Extension faculty and staff. We appreciate the cooperation from numerous Texas A&M AgriLife County Extension Agents, producers, universities, and private industry groups that contribute time, property, chemicals, and seed to conduct these field trials. Wheat market classes within these yield trials include Hard Red Winter Wheat (HRWW), Soft Red Winter Wheat (SRWW), and Hard Red Spring Wheat (HRSW).

During the 2023-24 season, Texas producers planted an estimated 5.7 million acres of wheat producing an estimated 78.4 million bushels with a statewide yield average of 32 bushels per acre. (National Agricultural Statistics Service, NASS).

The purpose of this publication is to provide unbiased yield data and disease and insect ratings for wheat producers across the state. Using this information, Texas wheat producers can make an educated decision concerning the most appropriate varieties for their geographic region.

Variety Selection: Selection of small grain varieties is one of the most important decisions a producer will make. This decision impacts potential yield (forage and grain), seed quality (test weight and protein), disease and insect management and maturity. It is important that producers diversify the varieties planted on their farms. Variety diversification spreads the risk associated with potentially devastating pests (leaf rust, stripe rust, Hessian fly, Wheat streak mosaic virus, wheat curl mite, greenbugs, etc.) and yield loss from adverse environmental factors (freeze, drought, etc.).

Producers are advised to select no fewer than 2 or 3 varieties to plant on their farms and preferably more, depending upon the size and location of fields. Variety selection should be based upon a combination of sound data from university trials and other reliable sources. Wheat varieties should be chosen based on multiple years of data (yield, pest and disease resistance, grain quality and maturity). High yield over multiple years and multiple locations demonstrates a variety's ability to perform well over diverse environmental conditions. Stable yield performance is an excellent variety selection tool. It is important to consider decreasing yields over a 2 or 3-year time frame, which may reflect a change in disease and/or insect resistance.

When selecting a variety for the 2024-25 season, producers need to

consider multiple year averages, recognizing the unusual climatic conditions that impacted yield and quality over the past several years. It is strongly encouraged that producers look at the 3 and 4-year averages where available, and to look at numerous relevant variety trial locations. There are typically 20+ wheat variety trials conducted across the state each year, and most of these contain analyses for multiple years.

Interpreting the Data: Yield and test weight at each location have been analyzed using appropriate statistical procedures. The statistical analysis provides the mean, CV, and LSD values. It is important to note these statistical values to prevent misinterpretation of any replicated data.

The mean is another term for the average. Therefore, a mean yield is the average of all plots within a trial. Individual variety yields can be compared to the mean yield to determine how these varieties performed within the trial (i.e. were they above or below average?). This average can also be used as an indication of the environment for that location. A low mean yield can indicate poor growing conditions were experienced in that season; likewise, a high yield average can indicate favorable growing conditions.

The **CV (Coefficient of Variation)** value, expressed as a percentage, indicates the level of unexplained variability present within the trial. A high CV value indicates a lot of variability existed within the trial not related to normal variations that might be expected between the varieties in the test. This variability may be the result of non-uniform stands, non-uniform insect or disease pressure, variability in harvesting, or other issues. CV values in excess of 15% signify that there were problems in the trial, leading the reader to question the validity of the data as a true representation of varietal performance.

The **LSD (Least Significant Difference)** value is a numeric range to help the reader determine if the varieties performed differently from one another within the trial. If the LSD value is 5 bu/ac in a trial in which Variety A yielded 36 bu/a and Variety B yielded 30 bu/a, then Variety A is said to be significantly better. In that same trial with an LSD value of 5 bu/ac at a 0.05 (5%) significance level, the statistical inference one could say is that Variety A would yield better than Variety B in 19 out of 20 trials conducted in which there was at least a 5 bushel difference in yield. In this hypothetical comparison, you might have a 20th trial with a 5 bu/ac difference that there is not truly a statistical difference between Variety A and B, but random chance caused the 5 bushel difference.

Texas A&M AgriLife Extension, in collaboration with our wheat breeding program colleagues in Texas A&M AgriLife Research, highlights these wheat varieties to producers. Wheat Picks are based on a minimum of three years of data (and at least two years for a ‘Watch List’ designation) over multiple regional locations. These wheat varieties are not strictly a list of recommended wheat grain varieties. But given the data, these are varieties we would choose to include on our farm. If you are planting other varieties, and you like them, continue to plant them. But consider trying one of these regional varieties on some of your acres, especially a variety that complements your other wheat variety’s maturity and insect/disease resistances.

*Planting seed weight is determined by both genetic and environmental factors. While varieties may be genetically programmed to have large or small seeds, seed grown in favorable conditions or climates will have larger seeds and may be more vigorous than the same variety grown in unfavorable conditions.

*Awnless variety. Yields adjusted to standard moisture of 13.5%. **Bolded** values indicate top group based on LSD.

**Hard white wheat variety

[†]Varieties ranked according to 4-year, 3-year, 2-year, then 2024 yield averages.

[‡]4-year average based on 2021, 2022, 2023, and 2024 data.

[∞]Winter survival ratings were taken February 8th with 0 representing no stand/dead and 10 being excellent.

Agronomic Information

Planting Date:	22-Oct
Seeding Rate (seed/ac):	1,100,000
Harvest Date:	24-Jun
Previous Crop:	Fallow
In-Season Estimated Precip:	4.5"
Irrigation Amount:	12"
Soil pH:	7.9

Trial Notes:

1. The trial was located approximately 14 miles west of Amarillo, TX.
2. The trial was fertilized prior to seeding at a rate of 80N, 35P. An additional 50N was applied on March 4.
3. Average yield was 16% higher and test weight 0.8 lb/bu more compared to 2023.

Cooperator: Texas A&M Research Farm

Herbicides: Prowl H20 was applied on March 5.

Agronomic Information

Planting Date:	7-Nov
Seeding Rate (seed/ac):	650,000
Harvest Date:	27-May
Previous Crop:	Fallow
In-Season Estimated Precip:	16.3"
Herbicides:	None

Trial Notes:

1. The trial was located approximately 4.5 miles south of Chillicothe, TX.
2. The trial was fertilized prior to seeding at a rate of 55N. An additional 25N was applied on February 23.
3. Average yield was 11% higher and test weight 0.2 lb/bu less compared to 2023.

Agronomic Information

Planting Date:	14-Nov
Seeding Rate (seed/ac):	750,000
Harvest Date:	28-May
Previous Crop:	Corn
In-Season Estimated Precip:	32.4"
Herbicides:	None

Trial Notes:

1. The trial was located approximately 3 miles northeast of Abbott, TX.
2. The trial was fertilized preplant by the cooperator. An additional 99N was applied on February 8.
3. Average yield was the same and test weight was 6.8 lb/bu lower compared to 2023.

Cooperator: P&M Farms

Trial Notes:

1. The trial was located approximately 7 miles northeast of Muenster, TX.
2. The trial was fertilized prior to planting at a rate of 15N, 40P, 30K, 10S. An additional 80N, 14S was applied on February 9.
3. Average yield was 4% lower and test weight 2.2 lb/bu less compared to 2022.

Cooperator: Scott Hermis

Agronomic Information

Trial Notes:

Planting Date:	20-Nov
Seeding Rate (seed/ac):	750,000
Harvest Date:	11-May
Previous Crop:	Corn
In-Season Estimated Precip:	10.8"
Soil pH:	7.8

1. The trial was located approximately 5 miles east of Castroville, TX.
2. The trial was fertilized prior to seeding at a rate of 200N, 70P, 20S. An additional 50N was applied on February 1.
3. Average yield was 12% higher and test weight 1.6 lb/bu more compared to 2021.

Herbicides: Ally (0.1 oz/ac) was applied on December 19.
Huskie (11 oz/ac) was applied on February 1.

Cooperator: Rollin Mangold

Agronomic Information

Trial Notes:

Planting Date: 7-Nov
 Seeding Rate (seed/ac): 750,000
 Harvest Date: 15-May
 Previous Crop: Sorghum
 In-Season Estimated Precip: 27.0"
 Soil pH: 7.9

Herbicides: Ally XP (0.1oz) and Amber (0.3oz)
 were applied on November 22.

1. The trial was located approximately 8 miles southwest of College Station, TX.
2. The nursery was fertilized prior to seeding at a rate of 17.5N, 59P. An additional 70N was applied on January 18.
3. Average yield was 85% higher and test weight 7.2 lb/bu more compared to 2021.

Agronomic Information

Planting Date:	11-Oct
Seeding Rate (seed/ac):	1,400,000
Forage Clipping 1:	11-Jan
Forage Clipping 2:	26-Feb
Grain Harvest:	22-May
In-Season Estimated Precip:	18.1"

Herbicides: Huskie and Axial Bold were applied on February 21.

Trial Notes:

1. The trial was located approximately 2.5 miles east of Crowell, TX.
2. The trial was fertilized at planting at a rate of 42N. An additional 42N was applied on Feb 7.
3. Average forage yield was 264% higher while dual-purpose grain yield was 21% lower compared to 2023.
4. There were no statistical differences observed between grain yields for dual-purpose and grain only trials in 2024.

Cooperator: Ronnie Allen

Agronomic Information

Planting Date	8-Nov
Seeding Rate (seed/ac)	1,000,000
Previous Crop	Wheat
In-Season Radar Estimated Precip	9.2"

Herbicides: MCPA (16oz/ac) was applied on February 7, 2024.

Trial Notes:

1. The trial was located approximately 1 mile north of Eula, TX.
2. The trial was not fertilized prior to seeding. The plots were topdressed at a rate of 30N on Feb 7.
3. Average total dry matter production was 72% higher than 2023.

Cooperator: Susan Davis

*Awnless Variety. **Bolded** values indicate top group based on LSD. [†]Freeze damage rated on 1-10 scale with 10 meaning no damage

Agronomic Information

Planting Date	3-Oct
Seeding Rate: Barley, Triticale, Wheat	1,200,000 sd/ac
	Oat 67 lbs/ac
Previous Crop	Corn
In-Season Radar Estimated Precip	19.1"
Fall Soil Test:	
	N (lb/ac) 18
	P2O5 (lb/ac) 0
	S (lb/ac) 102
	pH 7.4

Trial Notes:

1. The trial was located approximately 5.5 miles southwest of McGregor, TX.
2. The nursery was fertilized prior to seeding at a rate of 17.5N, 59P. An additional 100N was applied on December 11th. A final 113N was applied on February 8.
3. Freeze ratings were taken 17 days after freeze event. Temperatures hit a minimum of 14F and remained below freezing for approximately 86 hours.
4. Conditions were very good overall for forage production at this site.

Herbicides: None

Cooperator: TAMU McGregor Research Center

Agronomic Information

Planting Date:	10-Oct
Seeding Rate:	Barley, Triticale, Wheat 1,200,000 sd/ac
	Oat 67 lbs/ac
Previous Crop:	Sorghum
In-Season Radar Estimated Precip	17.8"
Fall Soil Test:	
	N (lb/ac) 36
	P2O5 (lb/ac) 152
	S (lb/ac) 68
	pH 7.8

Trial Notes:

1. The trial was located approximately 8 miles southwest of College Station, TX.
2. The nursery was fertilized prior to seeding at a rate of 17.5N, 59P. An additional 100N was applied on December 13. A final 80N was applied on March
3. Average total yield was down 51% compared to 2023. Periods of drought in November and February were contributors to reduced yield.

Cooperator: Texas A&M Research Farm

Herbicides: Ally XP (0.1oz) and Amber (0.3oz) were applied on November 22.

2024 TEXAS CERTIFIED SEED DIRECTORY

TEXAS DEPARTMENT OF AGRICULTURE COMMISSIONER SID MILLER
P.O. Box 12847 • Austin, Texas • (512) 463-7476 • www.TexasAgriculture.gov
For the hearing impaired: 1-800-735-2988 (voice) or 1-800-735-2989 (TDD/TT)

ABOUT THE DIRECTORY

The list of growers includes those who have made application for inspection under the seed certification program. The majority of these growers have had several years of experience in the production of seed under the certification program.

In addition to field inspection, all Foundation, Registered, and Certified seed must also meet the requirement for other varieties and/or off types. Seed is not of the Foundation, Registered, or Certified class unless the official label is attached to the container. All Foundation, Registered, and Certified seed must be labeled in compliance with all provisions of the Texas Seed Law.

Orders for Foundation, Registered and Certified seed, therefore, can be accepted by the listed growers only with the understanding that they will be filled when the Foundation, Registered or Certified requirements are completed. Inquiries or orders should be sent directly to the growers or seed dealers.

The Seed Certification Law was passed in 1923 and became effective in 1924. The purpose of certification is to create and make available a source of seeds and vegetative propagating materials of crops/plants grown, conditioned and distributed as to insure genetic purity and identity. The word "seed" as used in this directory includes all propagating materials.

Four classes of seed are recognized in seed certification: Breeder, Foundation, Registered and Certified.

Breeder seed is directly controlled by the originating or sponsoring plant breeding institution, firm or individual, and is the source for the production of seed of the certified classes.

Foundation seed shall be the progeny of Breeder or Foundation seed handled under procedures acceptable to the certifying agency to maintain satisfactory genetic purity and identity. The class is of a quality suitable for the production of Registered or Certified seed.

Registered seeds and plants are the progeny of Breeder or Foundation seed or plants and is produced and handled under procedures established in accordance with federal requirements, by a seed or plant certifying agency for the Registered class of

seed or plants for the purpose of maintaining genetic purity and identity.

Certified seed or plants are the progeny of Breeder, Foundation, or Registered seed or plants, except as otherwise provided by federal law, and produced and handled under procedures established in accordance with federal requirements, by a seed and plant certifying agency for the Certified class of seed or plants for the purpose of maintaining genetic purity and identity.

Selected Texas Native Germplasm is an extension of the Certified class of seed. Only forbs, grasses, and shrubs that are native to and produced in Texas are eligible for certification. This class applies to seed, seedlings, or other propagating materials from untested parentage of rigidly selected Texas native plant stands that have promise, but not proof, of genetic superiority.

Since operation under the rules and regulations of certification is voluntary, inspections are made and labels are issued to only those firms and individuals who may choose to qualify and are in a position to meet all requirements.

Varieties eligible for certification in Texas have resulted either from natural selection or through systematic plant breeding. Seed Certification is a proven method for keeping pedigree records on those approved crop varieties to insure their purity. This is accomplished by close inspection of the seed production field, the harvested seed and other inspections required by the various commodity standards. Without such a system, seed of new superior varieties would tend to become mixed and contaminated. They would lose their varietal identity and the particular characteristic that made them superior when they were released.

Planting seed bearing the official purple or blue label is the purchaser's assurance that the seed is the variety stated on the label, produced by a reputable concern qualified under the state laws as a certified seed grower, bred and produced in accordance with recognized standards and principles of plant breeding, grown, harvested, conditioned and otherwise prepared for market under regulations of the State Seed and Plant Board and direct supervision of the Commissioner of Agriculture. The official label can be secured only by those persons or firms who voluntarily apply and submit their planting seed projects to the close supervision, inspection and approval of the certifying authorities.

IMPORTANT NOTICE

All Foundation seed is labeled with a label printed on white background, all Registered seed is labeled with a label printed on a purple background and all Certified seed is labeled with a label printed on a blue background. In addition to the information as to the variety and the name of the producer, all labels bear the imprint of the state seal of Texas. ONLY SUCH LABELS ARE OFFICIAL.

All Foundation, Registered and Certified seed must be packed in new even weight containers and each container shall be labeled in accordance with the TEXAS SEED LAW. The Registered class of small grains and rice and the certified class of any crop kind may be sold in bulk, provided the identity of the seed is carefully maintained, the seed is handled in a manner which prevents a mixture and a bulk certificate accompany the movement of seed.
